

TRUCK AND CONCRETE MANAGEMENT. SIMPLIFIED.

SYSDYNE® and VERIFI® integration delivers a single user experience across platforms and the simplification of truck, material delivery, and in-transit concrete management.

VERIFI® In-Transit Concrete Management and dedicated software provide valuable data insights and analytics to concrete producers to help improve concrete quality, optimize mix designs, save time and reduce costs from the plant to the job site.

SYSDYNE®, leading Cloud-Native Software Platform for Ready-Mix Concrete Producers, and the VERIFI® system exchange critical batch and ticket information seamlessly for better decision making is based on the following platform:

Istrada, a complete concrete delivery management solution, integrates VERIFI® System to optimize loads and measures for slump and temperature, letting concrete producers deliver a more consistent product at a higher level of quality.

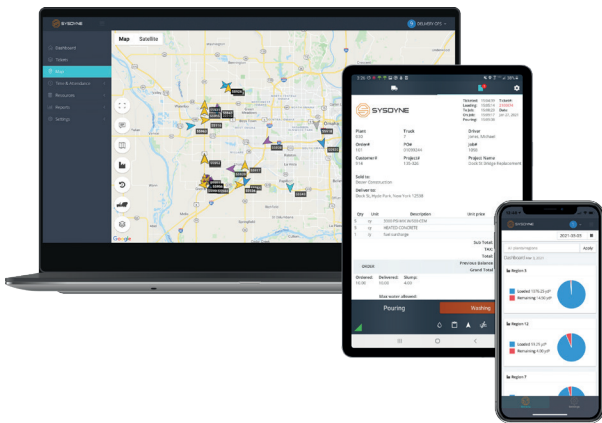

READY-MIX PRODUCERS' BENEFITS WITH ISTRADA AND VERIFI® COMBINATION:

- Reduce trucks cycle time
- Fewer loads rejected on site
- Lower cement and admixture usage
- Saving valuable time on the job
- Reduced disposal of unused concrete
- Additional revenue from returned concrete

OPTIMIZE YOUR DATA, SUPERVISION AND CONCRETE QUALITY:

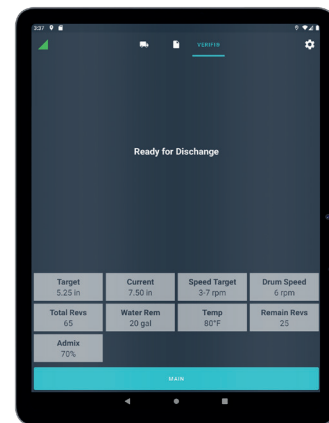

Online Platform

- Real-Time online status
- DVIR, Pre-Trip and Post-Trip Tracking
- Single e-Ticketing
- Timekeeping

Ready-Mix Cab

- Consolidated In-Cab Display
- Turn-by-Turn Navigation
- Detailed Load Information
- In-Transit Slump Management

ABOUT VERIFI®

Verifi specializes in customizable digital technology solutions tailored for ready mix concrete producers. Our next generation technology offers modular flexibility to meet specific business and market needs. It revolutionizes concrete process control by managing slump, water, and admixture during transit in concrete trucks, effectively minimizing variability through data-driven feedback control mechanisms. Our focus on data-driven solutions assists producers in streamlining production, materials management, and carbon footprint reduction within the construction industry.

ABOUT SYSDYNE TECHNOLOGIES®

Sysdyne is the only fully interoperable cloud-native software platform purpose built for ready-mix concrete operations; from sales, to production, to delivery management, billing and analytics (BI). Sysdyne's innovative cloud batch, cloud dispatch, delivery tracking, paperless ticketing, and customer collaboration applications help concrete producers run more efficiently and profitably. Sysdyne is headquartered in Stamford, Connecticut, with full product suite US based support servicing customers around the world.
